# GIGAPARTS DVMEGA BUNDLE

This document is to help you start you on your way to having your very own D-Star hotspot.

Once all the hardware is connected and ready you should be ready to plug in the power.

At this stage your screen will scroll with a ton of information and seem to hang on "Starting ircddbgateway". THIS IS NORMAL. It is having to go through a lot of processes on a small amount of RAM. Wait for it to prompt you for the Login and Password. The default username is "pi" and the password is "pi".

WHAT YOU NEED TO DO:

- Attach the DVMEGA board to the Raspberry Pi
- Attach your choice of antenna to the DVMEGA board
- You will need to connect to the internet via Wi-Fi adapter or ethernet
- Connect your choice of monitor to the Raspberry Pi
- Attach a keyboard and mouse to the Raspberry Pi
- Slot the provided micro SD card into the Raspberry Pi

It will then display "DVMEGA~>" and wait for your input. Type in "startx" to get to the desktop interface.

At this point click on the "**START HERE**!" text document that is waiting for you on your desktop.

Thank you for shopping with **GigaParts**!
